

# Solid bottom panels

Refrigerant condensers

Options and accessories

## Solid bottom panels

Solid bottom panels are required when the unit is installed by 30 cm or more and when intake air is ducted to the unit.

Factory-installed solid bottom panels

- ensure safe operation by providing protection from moving parts like sheaves, belts, motors, fan wheels, shafts,...
- ensure optimal performance by preventing bottom air from being drawn into the unit, thereby avoiding motor overloads

For more information on solid bottom panels, contact your [local BAC representative](#).
